Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Information Disclosure Statement

Applicant's representative is advised to verify the number 03014180 in IDS-1449 for its correctness as a US Patent and also if it pertains to the same technology.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-19, 21-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Haagenstad et al. (U.S. Patent No. 5,602,739).

As to claims 1-18, 21-27, Haagenstad et al. disclose a mobile event triggering method comprising an entry of a vehicle into a defined event location and computer for use in a traffic signal priority control system (See col. 5, lines 39-48); it further discloses a mobile event triggering method comprising evaluating a vehicle status with respect to at least one entry criterion; conducting an event entry action when the vehicle status meets the at least one entry criterion; evaluating the vehicle status with respect to at least one mobile event criterion corresponding to at least one mobile event; activating the at least

one mobile event when the vehicle status meets the at least one mobile event criterion corresponding to the at least one mobile event; evaluating the vehicle status with respect to at least one exit criterion (See Fig. 10); and conducting an event exit action when the vehicle status meets the at least one exit criterion(See col. 5, lines 39-48). Haagenstad et al disclose a storage device (See database in Fig.3) containing at least one event definition data block, wherein the at least one event definition data block contains mobile event criteria defining at least one mobile event (See col. 2, lines 38-58), and a processor (CPU) (See col. 6, lines 47-55) containing an algorithm that evaluates a vehicle status (258; Fig. 10) with respect to the mobile event criteria and activates the mobile event if the mobile event criteria are met. Also as shown in Fig. 9, it discloses detecting an event timeout condition that occurs. It discloses radio communication and traffic signal priority request and street mounted detector (emitter 32) (See col. 5, line 39-col. 6, line13).

As to claim 19, Haagenstad et al. disclose a mobile computer for use in a traffic signal priority control system (See col. 5, lines 25-48) comprising a storage device (See database in Fig.3) containing at least one event definition data block, wherein the at least one event definition data block contains mobile event criteria defining at least one mobile event (See col. 2, lines 38-58), and a processor (CPU) (See col. 6, lines 47-55) containing an algorithm that evaluates a vehicle status (258; Fig. 10) with respect to the mobile event criteria and activates the mobile event if the mobile event criteria are met.

Allowable Subject Matter

Claim 20 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
